

Design ◆ *Build* ◆ *Seamless!*

KITCHENS

Kitchens are often the nerve center of the home. They become the secret storage of family recipes. Families gather and share memories during big holiday feasts. Children make their first cookies in this room while standing on the kitchen stool. With such importance on this room, it's no wonder this is the first space in the home that gets remodeled. When it's time to remodel the heart of your home, we would love to understand your desires. With our designers and craftsmen we'll create the dream kitchen that's just right for you.

FIREPLACES

While the kitchen was once busy with the kids learning how to make cookies, us grown ups need more space to relax in and call home. Times change..and our needs within the home change. Children move out and the parents reclaim spaces once filled with childrens toys. Within these decades of time styles also evolve into more sophisticated environments. When those times of change come, Premier Kitchen and Baths is here to update those interiors spaces to the needs of today. We'll help you explore new styles and textures for your fireplace, living room, office and all other spaces beyond the busy kitchen.

LIVING SPACES

BATHS

This room is everyone's private little oasis from the world. It's where we center ourselves and get ready to tackle the world each day. It's also where we come to unwind and leave all the troubles of the day behind. Large or small, every bathroom should be a place of retreat and relaxation. Whether you are looking for the grandeur of a roman bath, the ultimate spa with enveloping warm towels or a luxury multi-head shower to wash away your worries...our designers and craftsmen are ready to create your personal oasis.

INTERIORS

ENTERTAINMENT SPACES

One can not live on kitchens and baths alone... Grand foyer entrance, media rooms, wet bars, sports rooms, man caves and sewing rooms are all places in our home where we express who we are. What we have accomplished in our lives is often expressed through our living space. We understand this and want to bring it all to a reality in your home. Our designers build and create these possibilities every day and would love to do the same for you. Your family and friends will come to love these rooms and spaces as much as we enjoy building them!

SERVICES

Kitchens:

A kitchen sets the tone for your home and relationships. From entertaining guests of family and friends to a quiet evening of relaxation around the dinner table with your kids or significant other, the focal point of your home deserves a certain elegance and personal ambiance that Premier Kitchen & Bath can execute with ease. From practical considerations such as the functionality of the cabinetry and appliances to the warm glow of under cabinet lighting illuminating the custom backsplash and stone tops...Premier will furnish the design, products, and complete build out of your dream kitchen.

Bathrooms:

Whether it is the frantic chaos of getting ready each morning for whatever your daily schedule has in store or the soothing comfort of “me” time, the bathroom has many roles to fill. How your bathroom fulfills the needs of your family’s lifestyle is not taken lightly at Premier Kitchen & Bath. As with the kitchen, great detail is considered to ensure that your master bath, guest bath, kid’s bath or powder room is the ideal space for whatever your lifestyle dictates. An easy clean place for your kids to get ready for school, a safe place for those who are unsteady on their feet, the area you get ready in before a night on the town or a needed escape from a crazy day might just describe what this room means to you. Premier can and will create that wonderful reality for you.

And beyond...

Premier Kitchen & Bath is not limited to only two rooms in your home! We can explore and design many other areas as well. Is your fireplace boring or the flooring throughout the home a patchwork of miscellaneous materials that make no sense? What size TV fits in your entertainment center now or how efficient is your home office? Is there a wall that could be removed to open up the space allowing the whole family to fit or gives more room for your guests to feel included in conversations? Maybe you are building a new home and need the expertise of qualified designers and skilled craftsmen to create and install the cabinetry in all areas of your new home. Let Premier help to explore, design and make the whole house your dream home. How can this happen?

Space Planning & Interior Design & Execution

First and foremost, your family’s lifestyle, budget and long term plans are considered when creating the perfect floor plan for the specific space. Several options are usually considered and then narrowed down through detailed discussions and constantly revisiting your priorities that were laid out earlier.

Premier Kitchen & Bath has in-house designers who have degrees in design and other specific training related to residential remodeling. These highly qualified designers will guide and direct you through the planning and design process of your exciting project.

Once the process is completed Premier’s experienced support team will check and double check the details, order and receive the product specific to your project.

When all the product has arrived our experienced project manager and skilled craftsmen carry out the installation of your dream project. Remodel projects require quite a few specialized skill sets such as: design and planning, product selection (showroom) and procurement and various contractor disciplines (carpentry, electrical, plumbing, drywall, tiling, painting, etc.) and of course, management of the entire project.

Premier Kitchen & Bath combines all of these talents under one umbrella to help ensure a cohesive design and stress free experience for you and your family. Let’s get started!!

OUR PROCESS

Your Needs and Ideas

We ask that you accumulate a collection of notes, pictures, and/or sketches that will help convey your needs and desires to us (Houzz.com & Pinterest.com are great resource). In addition, take some current digital photos of your existing room and, if possible, a few quick dimensions of the space being considered for remodeling.

FREE Consultation

You are welcome to drop by our showroom and introduce yourself to one of our friendly designers, but calling ahead will assure that we will have set aside the hour that is needed to thoroughly discuss your potential project. During this consultation, we will review all the pertinent information regarding your project and help define and/or refine your priorities. We will also advise you as to the feasibility of the project in regards to timeline, investment, and other expectations. For most clients, understanding the investment needed and defining what that includes, is a top priority. From our discussions and project review, we will establish an appropriate "Investment Bracket" for your specific project. This bracket will be comprehensive of the preliminary scope of work, product ideas, and other project priorities that were identified earlier.

The Next Step

After spending an hour together, our designers will have a good feel for your project and what it will entail to bring it to fruition. Likewise, you will have a better understanding of the ability and value that Premier can offer you. If you feel confident that Premier is a good fit for the project you are considering, the next step would be to schedule an in-home appointment. This step requires a design retainer that is based on the size and complexity of the project. This retainer is later applied towards the project cost.

Design Your Space

In order to produce a professional and comprehensive proposal, we need to visit your home. During the visit we will ask more questions based on the priorities we had set earlier. We will photograph, sketch, and dimension the area(s). This allows us to take in to account electrical, plumbing, and framing considerations. All products that are used in the project must also be specified and their respective quantities noted. A detailed scope of work must be written to coincide with the design concept. In addition, there will be conceptual drawings that explore one, two, or more design ideas for your special area(s).

Presentation and Scope of Work

While at your home we will have invited you back to our showroom, setting the date & time for your first presentation. Here we will explore the conceptual drawings and suggest product options as well as review the scope of work for your project. Through our discussions we will refine, and better define, the drawings and scope of work. We will also discuss the proposed investment. Our next meeting date and time will be set to continue the process. This process of defining your remodeling project might take 2-3 meetings or more depending on details and complexity. There is no pressure to hurry.

Agreement and Deposit

After the design, product selection and scope of work have been finalized...our working document will be signed by both parties and a deposit will be collected to commence the project.

Pre-construction Meeting

Approximately a few weeks after contract signing, our project superintendent and designer will meet with you at your home for a pre-construction meeting. At this time, job site details such as: product delivery, home access, jobsite protection, and scheduling will be discussed. This meeting also provides an opportunity for your project manager to see the jobsite and discuss any special needs or details prior to the commencement of your project.

Work Begins

This is the working phase of the project. The length of this phase can vary from a few days to a few months depending on the size and scope of your project. Throughout this phase, you will become very well acquainted with our personable in-house craftsman. You will also see your project manager and designer stop by at frequent intervals to assure all the details are carried out as planned.

Project Completion

During this phase of the project all the details and remaining items come together to complete the finished look. At this time, increased job site visits and effective communication help bring the project to a close in a timely manner.

Final Jobsite Review

The final step in our process is for your designer and project manager to perform a final jobsite review to see that everything has turned out as planned and that you are completely satisfied with the outcome. With your permission, we will take photos of your completed project to help inspire other homeowners that are just embarking down the remodeling road illustrating that the process is simple and enjoyable.
